

Board Strap Installation

Straps can be difficult to secure into your board when you first install them. Here's a simple way to get your strap on tight and secure.

Helpful Tools:

- Screwdriver

Place the pad down where you would like your stance.

Stand on the pad and set the strap, upside down and on the inside of the pad, then into the strap hole on the pad.

Screw strap into the pad and board, but leave strap loose enough to move back & forth. Be sure screw goes in straight to avoid stripping threads.

Rotate pad around 180 degrees over your foot.

You are now ready to screw in the second side.

Screw the other side of strap through the strap holes on the outside of the pad.

Go back to the inside and tighten the screw all the way.
